How to Use Kaggle

MCP Server

Power up your Agents and streamline development workflows using Kaggle's resources.

Copy as Markdown

Getting Started

To run the remote server, you need to paste the following code block into your client's configuration. The remote server URL is `https://www.kaggle.com/mcp`.

Configuration Examples

Gemini CLI

```
gemini mcp add --transport http kaggle https://www.kaggle.com/mcp
```

Alternatively, you can add the following to your `~/.gemini/settings.json` file:

```
{
  "mcpServers": {
    "kaggle": {
      "httpUrl": "https://www.kaggle.com/mcp"
    }
  }
}
```
